Gen-z AI PDF Study Test

Topic: Photosynthesis

Photosynthesis is the process by which green plants make food using sunlight, carbon dioxide, water and chlorophyll.
Oxygen is released as a by-product.

Equation: 6CO2 + 6H2O -> C6H12O6 + 6O2

Revision points:
1. Sunlight provides energy.
2. Chlorophyll absorbs light.
3. Carbon dioxide enters through stomata.
4. Water is absorbed by roots.
5. Glucose is produced and oxygen is released.

Task: Summarize this PDF in Hinglish and make 3 MCQs with answers.
